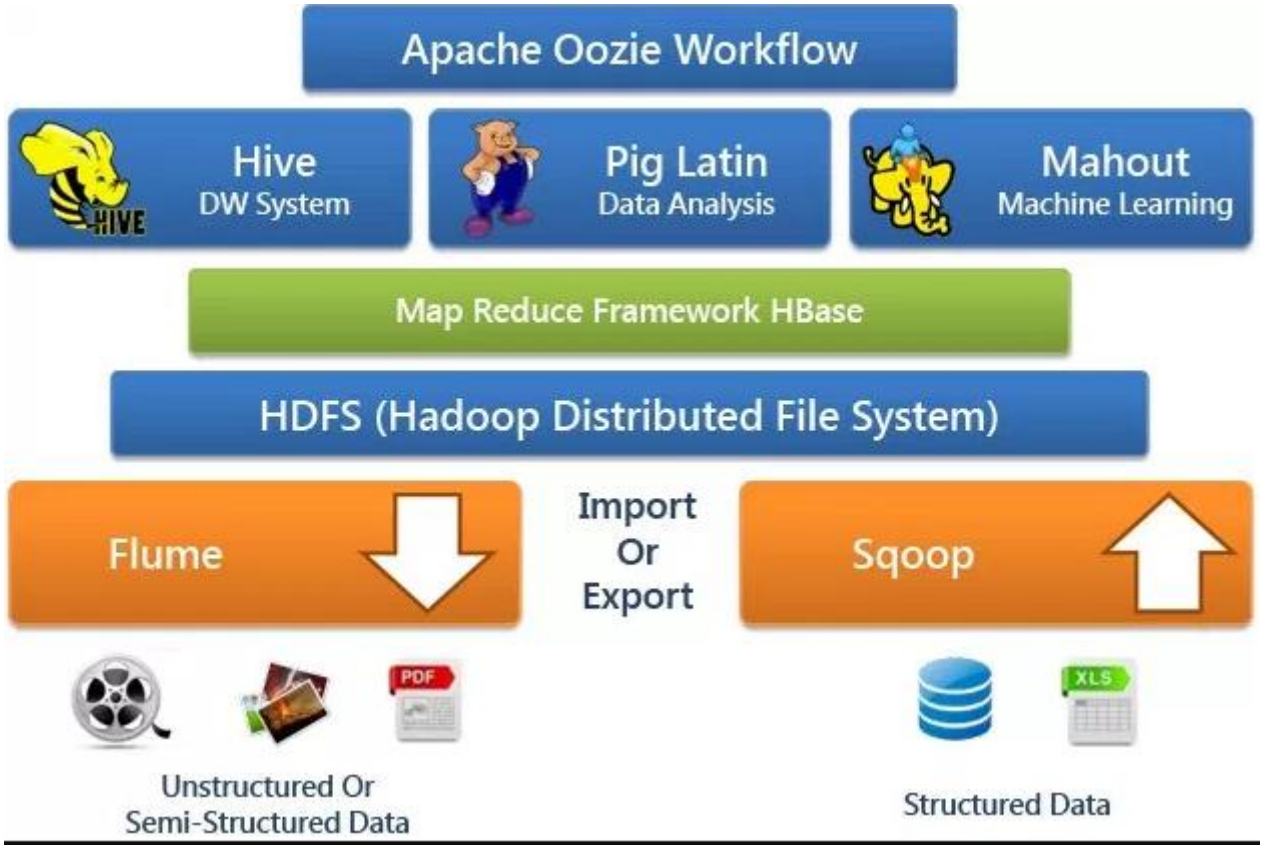
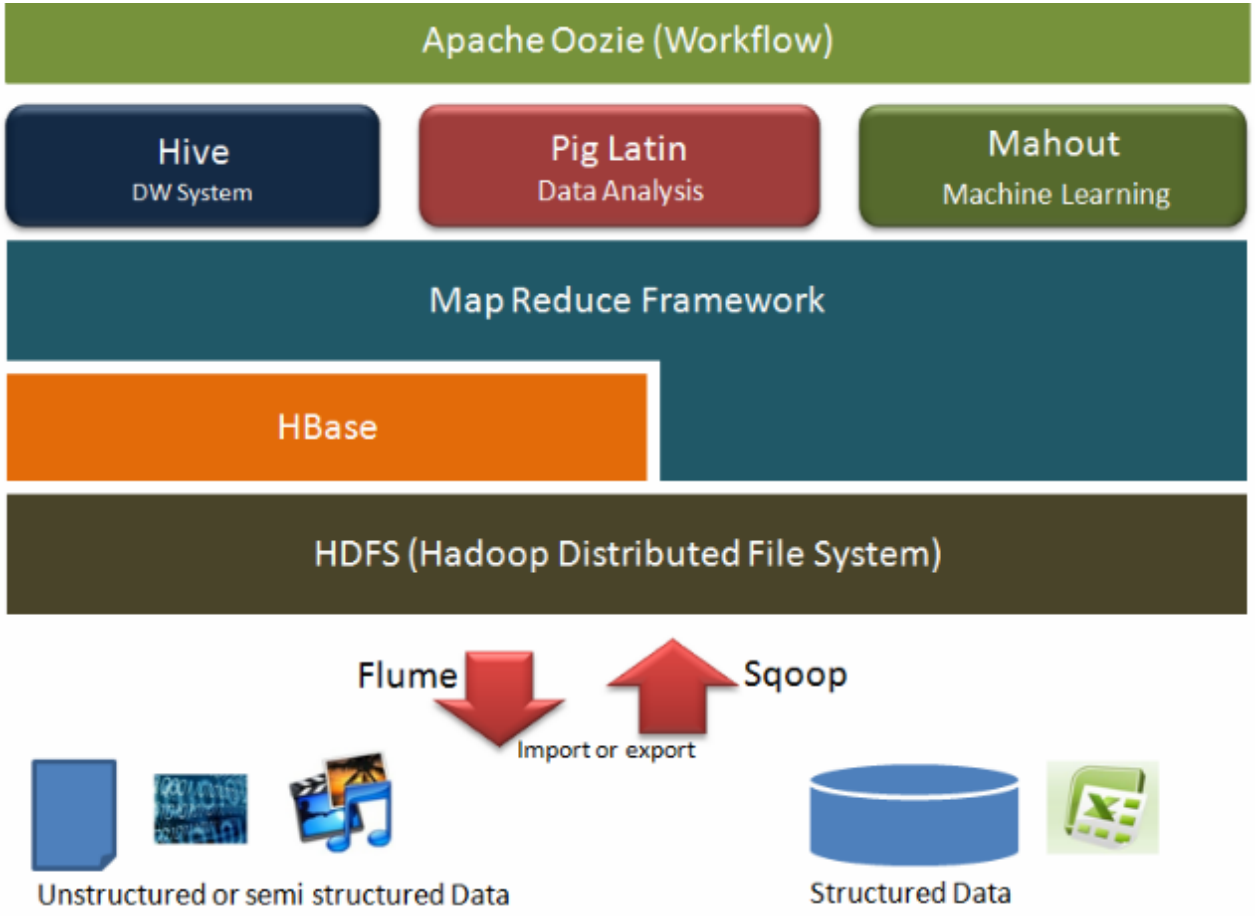
Pig, Making Hadoop Easy

Hadoop Ecosystem

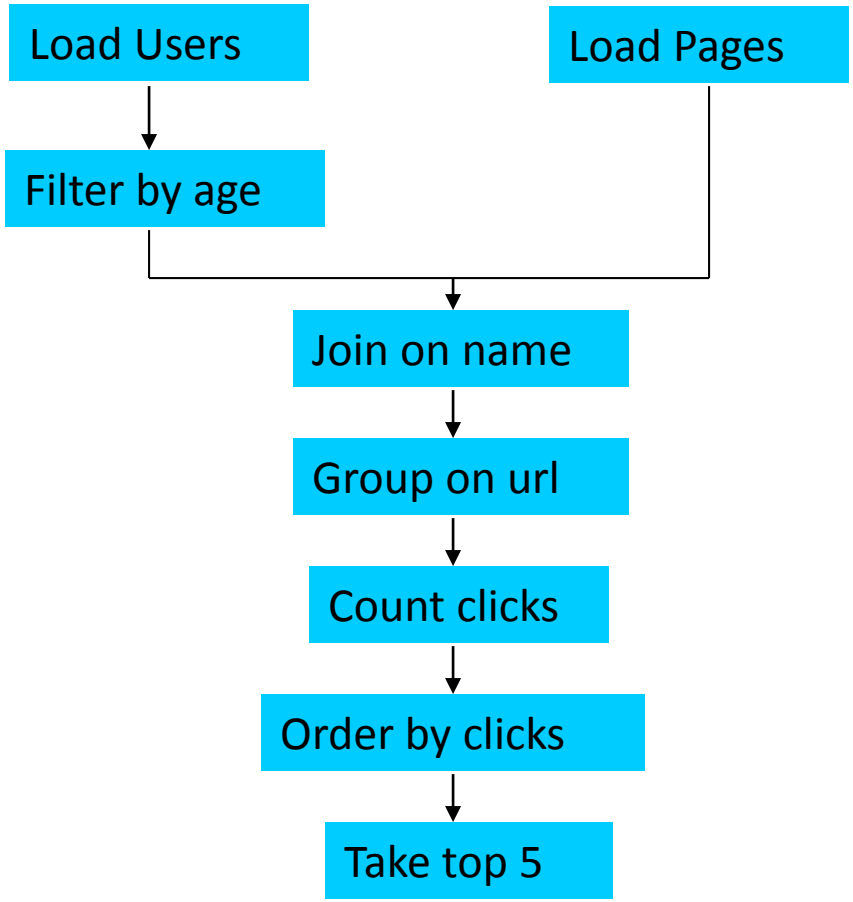


Hadoop Ecosystem



Motivation By Example

Suppose you have user data in one file, website data in another, and you need to find the top 5 most visited pages by users aged 18 - 25.



In Map Reduce

```

        jc.run();
    }
}
```

In Pig Latin

```
Users = load 'users' as (name, age);
Fltrd = filter Users by
        age >= 18 and age <= 25;
Pages = load 'pages' as (user, url);
Jnd = join Fltrd by name, Pages by user;
Grpd = group Jnd by url;
Smmd = foreach Grpd generate group,
       COUNT(Jnd) as clicks;
Srtd = order Smmd by clicks desc;
Top5 = limit Srtd 5;
store Top5 into 'top5sites';
```

Pig and Pig Latin

What is Pig?

- Apache Pig is a Hadoop platform for creating MapReduce jobs. Pig uses a high-level, SQL-like programming language named Pig Latin.

  The benefits of Pig include:

  - Run a MapReduce job with a few simple lines of code.
  - Process structured data with a schema, or Pig can process unstructured data without a schema. (Pigs eat anything!)
  - Pig Latin uses a familiar SQL-like syntax.
  - Pig scripts read and write data from HDFS.
  - Pig Latin is a data flow language, a logical solution for many MapReduce algorithms.

Pig Latin

- Pig Latin is a high-level data flow scripting language.

  Pig Latin scripts can be executed one of three ways:

  - **Pig script:** write a Pig Latin program in a text file and execute it using the pig executable.
  - **Grunt shell:** enter Pig statements manually one-at-a-time from a CLI tool known as the Grunt interactive shell.
  - **Embedded in Java:** use the PigServer class to execute a Pig query from within Java code.

The Grunt Shell

- Grunt is an interactive shell that enables users to enter Pig Latin statements and also interact with HDFS.
- To enter the Grunt shell, run the pig executable in the PIG_HOME\bin folder:

```
[root@sandbox ~]# hadoop fs -put movies.txt /user/hadoop/
[root@sandbox ~]# pig

Pig Latin Types

Category	Type	Description
Numeric	`int`	32-bit signed integer
	`long`	64-bit signed integer
	`float`	32-bit floating-point number
	`double`	64-bit floating-point number
Text	`chararray`	Character array
Binary	`bytearray`	Byte array
Complex	`tuple`	Sequence of fields of any type
	`bag`	An unordered collection of tuples, possibly with duplicates
	`map`	A set of key-value pairs. Keys must be character arrays; values may be any type

Who uses Pig for What?

- 70% of production jobs at Yahoo
- Also used by Twitter, LinkedIn, Ebay, AOL, …
- Used to
  - Process web logs
  - Build user behavior models
  - Process images
  - Build maps of the web
  - Do research on raw data sets
